Sign up for training

Once again let's talk about service. Guess what it is on the picture? These are not parts from sunk Titanic. This is how one burning head of dark infrared heater [RAD E220](#) could look if not cleaned for several years. It is an irony that high quality of the product often causes that the user is tempted to slack technical maintenance. „It worked well, anyway“ is the usual argument. Missing on periodical service of your precious energy system will always catch up on you. And when it lets you down then it takes big job and finances to save it. Often more than the costs of regular maintenance.

EVAPORATIVE COOLING IN AGRICULTURE

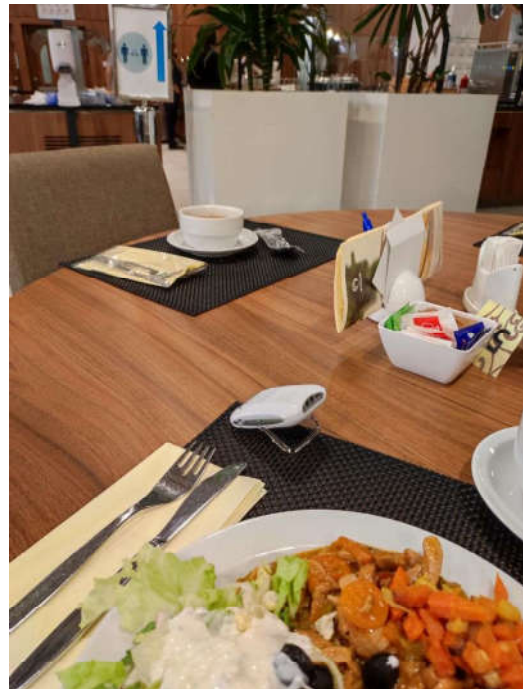

Big cooling projects in agriculture are best to be planned right now. Whether we talk about green houses, animal farms, dairy and meat producers etc it is time to start. Heat in the interior often results in increased death rate of animals, decrease in production, delayed harvest and draught of plants, limited maturity of animals in summer. Dangerous gases accumulated inside /ammonia and others/, pollution, dust and insects make life of animals, plants and staff difficult and influence efficiency and productivity. Different solutions are technically complicated or too expensive. Using evaporative system to cool down the premises and ventilate the air to replace it with fresh one from outside is the top option. Main benefits: cooling of particular zones inside, increased milk and meat production (reported 15 % difference), boosted egg production with larger size and less cracklings, lowering level of gases inside, increased harvest of berries, vegetables, flowers and other plants and improved conditions for animals and plants during season of spring, summer and autumn. Take a look at photographs from various installations of our partner in Poland.

PERSONAL DECONTAMINATION

Are you planning vacations or Spa treatment? Be aware of the threat called „covikron“ as well as a regular flu. Whatever you pack, bring with you compact personal protection. We would like to share our own experience with products from [AERIASHIELD](#) line. Our colleague visited famous Slovak Spa in Piešťany having [FOREVER](#) and [TRAVEL](#) on her all the time. The critical moments were of course in restaurant where there is most of people concentrated and it is impossible to wear a mask while eating. We are happy to say she is the only one that was not tested covid positive and sent away when infected person appeared inside and spread covid around. Take a look at product line of decontamination on our [e-shop](#) and choose the one that will suit you the best.
