IT REALLY PAYS OFF IN WINTER!

ADRIAN GROUP has a price bomb for you! Buy the [ADRIAN-AIR EV](#) evaporative coolers now for almost half the price and get several advantages right away! Save a lot on your purchase, save up to 10 times your electricity consumption in the season, and book an installation appointment now without unnecessary waiting (assembly is not necessary for mobile units). To reduce the temperature of the intake air from 35°C to 25°C at the outlet, you will consume ten times less energy than when using a standard air conditioner, and the effect will be immediate. And all this with only the use of ordinary water and the ingenious transfer of energy through evaporation. Also use the ventilation mode and thus ensure suitable hygienic conditions in the workplace. Our unbeatable sale is only valid until the end of 2022!

Name	Description	Catalogue price	Special offer
ADRIAN-AIR EV 5000	Mobile cooler 5 000 m ³ /h	520,00 €	320,00 €
ADRIAN-AIR EV 8000	Mobile cooler 8 000 m ³ /h	864,00 €	520,00 €
ADRIAN-AIR EV 18 down	Big unit with air outlet at the bottom 18 000 m ³ /h	1 346,00 €	950,00 €
ADRIAN-AIR EV 18 top	Big unit with air outlet at the top 18 000 m ³ /h	1 346,00 €	950,00 €
ADRIAN-AIR EV 3500	Mobile cooler 3 500 m ³ /h	400 €	240,00 €
ADRIAN-AIR EV 22000	Mobile cooler 22 000 m ³ /h	1 120 €	620,00 €
ADRIAN-AIR EV 18000	New design mobile unit 18 000 m ³ /h	1080 €	600,00 €

NEW HEATING REFERENCES

The world-renowned manufacturer of equipment for dental clinics, **DIPLOMAT DENTAL**, which is our traditional customer, decided to replace the original dark gas infrared heaters with the new **ADRIAN-RAD E222s**. In the first phase, we installed and set into operation 36 pieces with new gas connection sets and chimneys in the main production facilities. We added the new **ADRIANSMART BOK** control system with remote control via mobile phone or PC. In this exchange, the customer gets new appliances with all the innovations and improvements. The new warranty will apply to the products at a time when the prices of components and materials are still rising. It is economically very interesting to eliminate the cost of spare parts for dark gas infrareds that are around 20 years old. Huge benefit is the installation of coaxial chimneys. Heating no longer affects the indoor environment by burning air from the space and releasing fumes into the building. We look forward to further long-term cooperation.

NEW GENERATION OF HERKULES DESTRATIFIERS

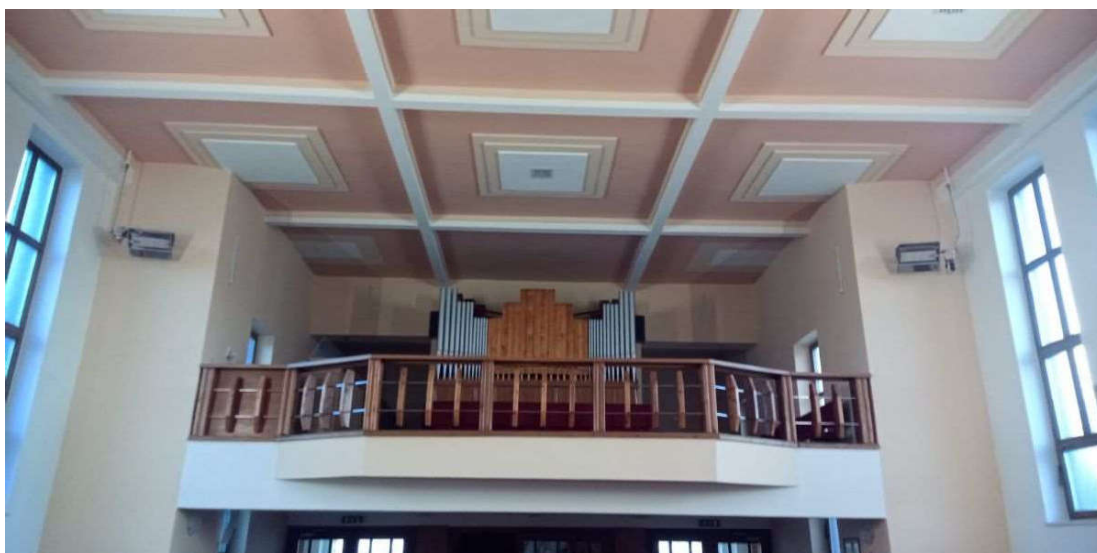

At a time of enormous pressure to save energy and increase the efficiency of energy systems, additional systems such as destratification, control systems, etc. are coming to the fore. Particularly [destratifiers](#) represent a very effective solution that is easy to implement and install. Correct technical design for a suitable building has the potential to bring 10 to 15 % of additional savings on energy costs for heating. The popular [HERKULES](#) range has just undergone a complete change of construction and design. The entire innovation was focused on enlarging the vent hole and modifying the slats to make air distribution over a larger area in the space more efficient. The grid takes into account the need to direct the flow more efficiently. The fans were replaced by modern models with significantly reduced electrical consumption while keeping sufficient air flow in the case of H55 and H63. The thermostat has become a standard integrated part of the solution. The result is a more economical product with more efficient air flow.

CHURCH OF THE SACRED HEART OF JESUS, JANOVCE (BARDEJOV COUNTY)

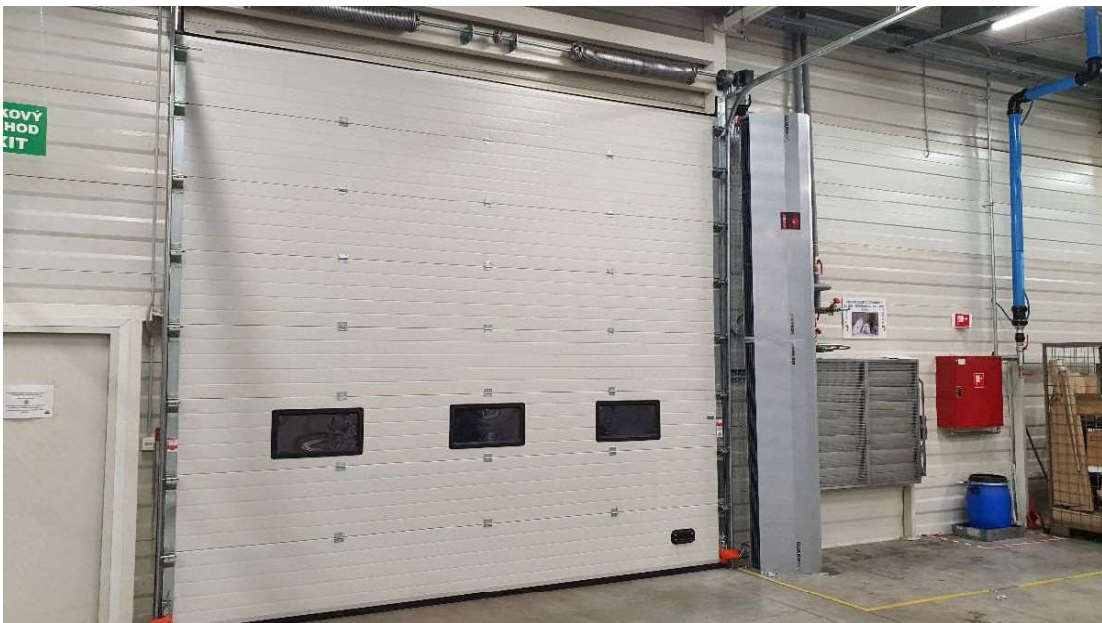

Last year, we were approached by a representative of the parish council to exchange the old ceramic infrared heaters, which served them for more than 15 years and it was not profitable to repair them, for new ones. These are 4 pieces of [ADRIAN-RAD CRE](#), which were placed in such a way as to heat the area of pews for the faithful and the area for the priest and assistance. During October 2022, we successfully put the new infrared heaters into operation. Radiant heating for sacral objects due to their irregular operation is one of the most suitable methods. These are often older buildings, the heat losses of which are significant. It is not necessary to heat the entire volume of air in the space to the desired temperature, but it is enough to primarily heat the people, the furniture and the floor in order to achieve the desired feeling of warmth.

ELTEK HAS DECIDED FOR DOOR CURTAINS

The company ELTEK from Liptovský Hrádok asked us for a solution of door curtains for an industrial gate, through which they load material and ship products at frequent intervals. Due to the complicated layout of building construction elements (such as passenger doors) and the inappropriate type of gate opening for horizontal installation, vertical assembly from one side of the gate was chosen. Installation of hot water distribution systems, wiring and door curtains was handled in cooperation with Ing. Peter Zábranský. The company's building has a boiler room, the output of which was not used to its maximum, and therefore it was possible to install door curtains with a [GUARD PRO 200W](#) hot water exchanger. Hot water door curtains have the fastest start-up and thus ensure that the heat losses of the heated space after opening the gate are as low as possible. With a correctly used heating system and a correctly chosen technical solution for door curtains, it is possible to save up to 12 % of annual heating costs.

VISEGRAD 4 BUSINESS

On October 13th 2022, the international business conference "Visegrad 4 Business" took place in the Carlton Hotel in Bratislava. More than 200 entrepreneurs from all four countries took part in the event. They discussed the most pressing economic topics such as the energy crisis, post-pandemic recovery and the internationalization of the VISEGRAD Four. The conference was co-organized by the Council of Slovak Exporters, the Czech Association of Exporters, the Hungarian business club "Magyarok and Piacón Klub" and the Institute for Eastern Studies, which is organized by the Polish Economic Forum. The discussion culminated in a political panel with the participation of state secretaries and V4 representatives, who reflected on the topics debated by entrepreneurs during the day.
