NEW REFERENCE - FARM VYCHODNÁ

Farma Východná - the organic farming business located at the highest mountain point in Slovakia in Liptov is our long-standing customer. In the premises of the milking parlor, it has already been verified for years that the best heating is gas infrared heaters, as they only need to heat intermittently during short periods of the day, mainly due to the increase in the temperature of the space for the workers and for the milking and washing technology not to freeze on cold days. The space of the milking parlor is designed for heating 4 pieces of infrared heaters, while two pieces were of older production date and were no longer operational. Therefore, in November 2023, we delivered 2 pcs of brand new **ADRIAN-RAD_CHE** ceramic plate infrareds of the same power, which ensured a stable room temperature in harsh conditions.

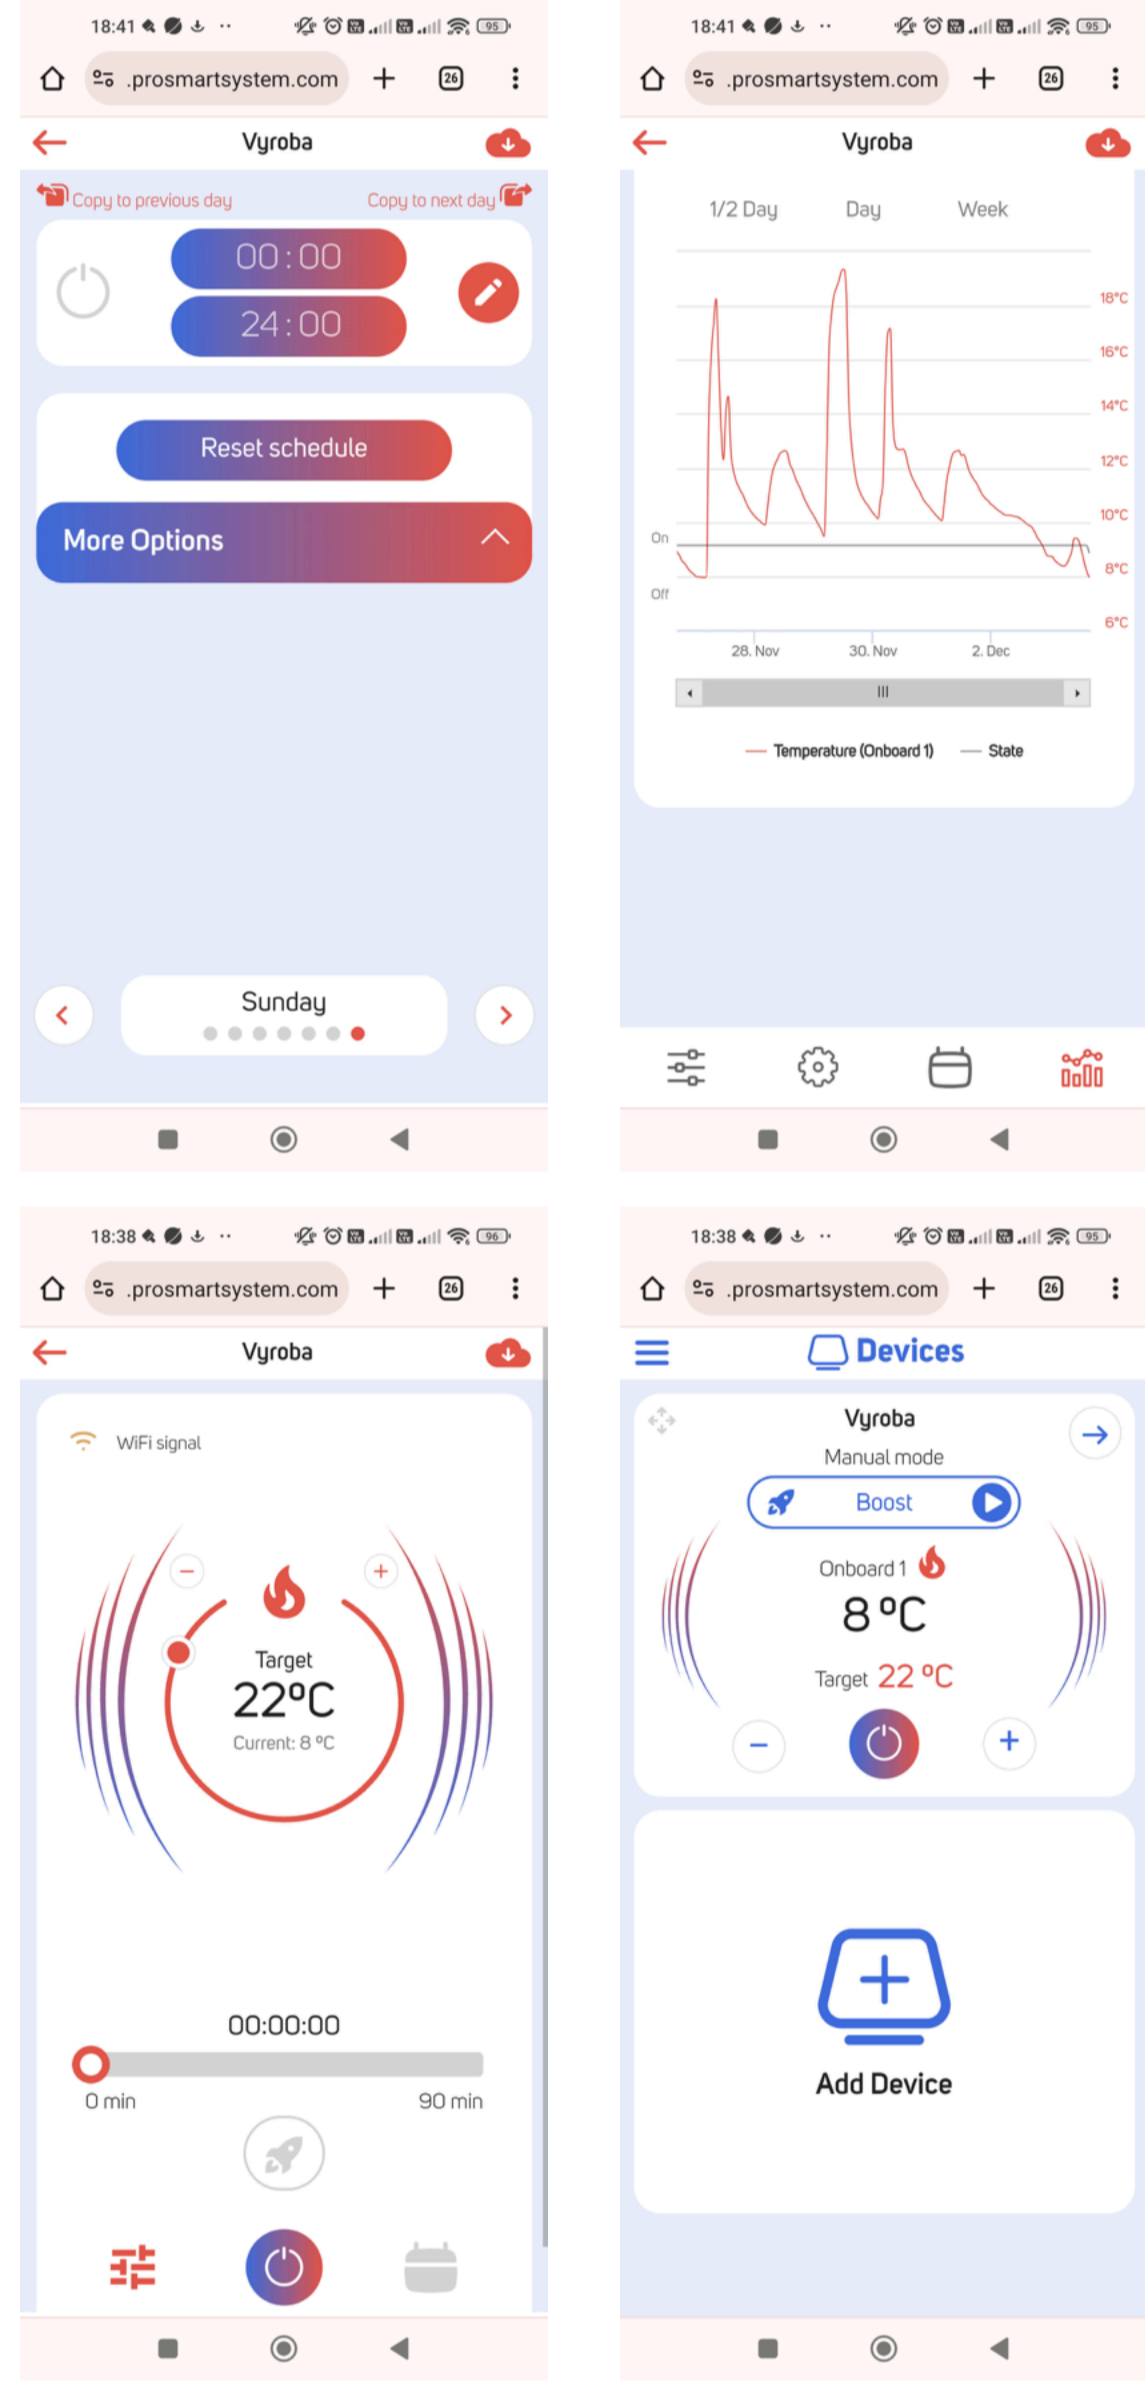

NEW REFERENCE PORSCHE PRODUCTION PLANT, DUBNICA

In October this year, we supplied adiabatic cooling for the engineering company Porsche Werkzeugbau. The technical solution in this case consisted of 8 **ADRIAN-AIR_EV18KD** adiabatic cooling units with a unit maximum flow of 18,000 m³/hour, which were placed on the roof and cool air is distributed to the space through the skylight through air ducts through multi-sided diffusers. The uniqueness of this installation is the use of a central control system that allows each cooling unit to be controlled from one place. The control system in this case consists of one central panel, while each cooling unit has its own control module and temperature + humidity sensors. Through the central control system, an authorized person can control each cooling unit separately in ON/OFF mode, can regulate its air flow, and can also see which cooling unit is in failure without having to climb onto the roof. By using a central control system, higher efficiency is achieved, which saves time as well as resources for cooling operation - electricity and water.

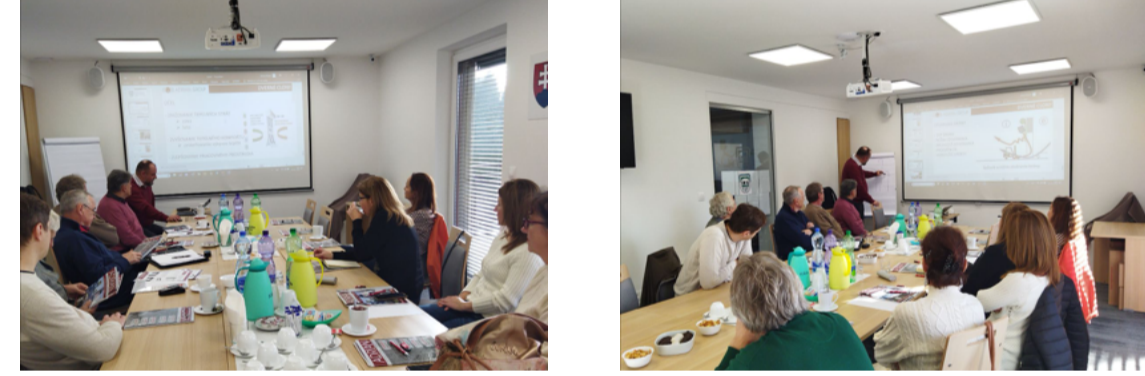

ADRIAN SMART NEWS

With the new year comes the renewed **ADRIANsmart**. We are currently testing for you in the BETA version an improved program for smart control of any device or system switched electrically. Based on positive reactions, the range of functions is maintained. We focused on user comfort and better clarity, whether you use **ADRIANsmart** via mobile or computer. Get all control modules on one screen, sort and name your zones as you wish, get a clear summary or clear information about a specific module at a glance.

SLOVAK CHAMBER OF CONSTRUCTION ENGINEERS AND ADRIAN GROUP

The professional presentation on the topic of the use of **door curtains** in industrial as well as non-industrial objects and the design of evaporative cooling caused positive response. Thanks to the regional office in Banská Bystrica and the personal involvement of the chairman of the regional technical section of the Technical Equipment of Buildings Mr. Ing. Divok event had a great turnout and an excellent level. We thank the organizers and all participating designers. Watch the presentation on the topic of **door curtains**, which is a current topic today, especially after the increase in energy prices, for anyone who is interested in saving sensibly and paying less for heating or cooling.

GENERAL ASSEMBLY OF ZSP SR

At the end of November 2023, the General Assembly of the Slovak Engineering Industry Association was held at the Falkensteiner Hotel in Bratislava. At it, the members got acquainted with the activities of the ZSP SR for the past period, the current status and the proposed activity. The participants exchanged opinions and experiences on how to maintain production and employment in the current difficult economic situation.

WINTER SHUTDOWN

Dear partners, **ADRIAN GROUP** is planning a winter shutdown in the period from 23/12/2023 to 21/1/2024. Delivery of goods in the new year is possible after 8/1/2024. Plan your orders and deliveries of goods or spare parts with us carefully and schedule your service ahead at adrian@adrian.sk. The emergency service for urgent calls works at +421 947 978 973.
