NEW REFERENCES – PORFIX – AERATED CONCRETE BLOCKS

A well-known Slovak manufacturer of aerated concrete blocks in Zemianske Kostofany approached us with a request for service of an older [cooling adiabatic unit](#). As a result of long-term neglected service and age, failures occurred on important components, which unfortunately are no longer available for this type and this manufacturer. That's why they decided to replace it with a new one using the existing ventilation pipe and water and electricity distribution. In this way, we have ensured the cooling of an important part of the production with the trouble-free operation of the equipment, which we can also service without any problems in the future for many years to come.

ECOLOGICAL AIR CONDITIONING IN PRACTICE

Traditional glass production in Lednické Rovne is a very challenging environment in terms of the working conditions for the employees. In a situation where a lot of thermal energy comes from everything and everywhere by radiation or convection, the employee is exposed to constant heat and overheating. [Local cooling](#) for selected workplaces is a necessity and at the same time the only way to ensure the improvement of the quality of the working environment and safety. [Ecological air conditioning](#) is gradually being expanded and installed on all strategic lines of the company. Only by evaporating water and using electricity at the level of a maximum of 1 kWh per unit can we cool the outside air taken in by up to 12° C. The cooled air is heavier than the warm, degraded air inside, and therefore it will fall exactly to the designated place. The use of classic air conditioning in production premises of this type would be many times more expensive as an investment, and its operation would cost more than 10 times in electricity consumption alone. Order space air conditioning with [environmentally friendly](#) water. Contact us at adrian@adrian.sk

ADRIAN GROUP AT MSV NITRA

Our participation in the International Engineering Fair MSV NITRA 2023 was primarily focused on [ecological air conditioning](#). ADRIAN GROUP technicians created a functional cooling tower that vividly demonstrated how air can be cooled using only water and minimal electricity consumption. 18 000 m³ per hour, cooled, purified and precisely directed to the place of need. Maximum effect at minimum costs. The [mobile cooling unit](#) has attracted the attention of those who are renting and cannot make construction modifications or need to cool rather smaller spaces. [Door curtains](#) and [SONNIGER hot water units](#) were also given space directly on the stand. The [dark gas infrared heaters](#), which are still among the unsurpassed heating systems for tall halls with insufficient thermal properties, were not to be missed. We thank all visitors and look forward to cooperation.

INTERNATIONAL BUSINESS DAY

The Slovak Investment and Trade Development Agency (SARIO) prepared the International Business Day 2023 international cooperation event on May 10, 2023 in Bratislava. The event was held under the auspices of the Ministry of Economy of the Slovak Republic and in cooperation with the Embassy of the Czech Republic in Bratislava and the Ministry of Industry and Trade of the Czech Republic. The event was welcomed by 151 companies, which had more than 500 mutual negotiations on future business cooperation planned throughout the day. In addition to more than a hundred Slovak companies, including ADRIAN GROUP, and the numerously represented Czech Republic, companies from ten other countries of the world took part in the event.

MEETING OF SLOVAK CHAMBER OF INDUSTRY AND COMMERCE DELEGATES

On May 16, 2023, a meeting of the highest body of the Slovak Chamber of Commerce and Industry, the Assembly of SOPK Delegates, took place. During the first part, its participants voted and approved basic documents, the annual report and implementation of the budget for 2022 and the budget and activity plan for 2023. They also adopted communiques and approved resolutions. In the second part of the ceremony, with the participation of guests, representatives of the diplomatic entities in Slovakia, representatives of partner business institutions, representatives of municipalities, universities and the media, the theme of 30 years of the Slovak economy dominated. Speakers at the conference were the chairman of the SOPK Peter Miňok, the chairman of the Slovak Academy of Sciences Pavol Šajgalik and the editor-in-chief of the TREND weekly Ronald Ižip. This was followed by the announcement of the winners of the SOPK Grand Prize for the application of ethical principles in business, by which the chamber has been awarding the ethical behaviour of companies since 2002 and still as the only institution in Slovakia. The announcement of the Junior Achievement TOP competition is part of the ceremonial part of the meeting of the SOPK Delegates' Assembly every year. It is an award for the Creativity, Courage and Entrepreneurship of students involved in the Applied Economics educational program.
