REDUCING THE ENERGY CONSUMPTION OF BUILDINGS WITH DOOR CURTAINS

Minimizing heat loss using **door curtains** is a proven and effective solution. Even in the renowned company NEUMANN ALUMINIUM, fixed energy costs are reduced in reasonable ways. We are currently working for them with our partner ŠALIGA s. r. o. and we installed **door curtains** without heating on the other two gates. Considering the type of gate and the method of opening, as well as the layout of spaces around, we agreed on mounting from the side of the gate, while the width of the opening allows the use of the curtains from only one side. Since the flow and velocity of blown air are essential for the effectiveness of the solution and the operation did not require heating passage zone, we used appliances without heating and an exchanger. The curtain is a self-supporting structure that is fixed to the floor and side wall. Additional elements designed by the customer will protect it from the danger of impact of the handling equipment.

HOW TO ENSURE THE FUNCTIONALITY OF THE RADIATOR IN AN AGGRESSIVE ENVIRONMENT

Our customer ZLH Plus, a.s. is a well-known Slovak foundry with an admirable tradition. It uses our ceramic infrared heaters **ADRIAN-RAD CBE** and dark infrared emitters **ADRIAN-RAD E**. The use of appliances is conditioned by the characteristics of specific premises. There is extreme dustiness and often high humidity in many buildings. Likewise, the conditions for installation are mostly limited in confined spaces. They currently chose another 3 units of ADRIAN-RAD E222 for local heating for a specific workplace. As you can see in the photos, the environment is really aggressive. The closed construction of the E-type heater with burner and fan in a monoblock provides the necessary protection. Dust and dirt would make the exhaust fan inoperable quickly and are also dangerous for other parts. The combination with air intake for combustion from the exterior is therefore a necessary condition.

REVISION CHECKS OF CHIMNEYS

Trouble-free and reliable operation of heating appliances directly affects the condition of chimneys. Decree 401/2007 Coll. there is also a regulation on chimney cleaning and revisions. The following regulations apply to industrial heating appliances for gas fuels (G20 and G31):

PROFESSIONAL INSPECTIONS AND PROFESSIONAL TESTS OF GAS APPLIANCES

Professional inspections and professional tests of gas equipment include inspection of the gas supply and gas appliances by a professional inspection technician. Such an inspection should be carried out once a year in order to detect any gas leak in time and ensure the protection of the health and life of users. The goal of every professional inspection and professional test of gas and gas equipment is to check their function by measuring and testing and to find defects that could endanger health, life or property.

SERVICE PARTNER TRAINING OCTOBER 2023

We invite all service partners of ADRIAN GROUP to the training, which will take place 10/10/2023 and 10/17/2023 from 9:00 a.m. to 12:30 p.m. You will learn about the changes in our range of products in 2023 at ADRIAN GROUP, and at the same time we will take a closer look at the design differences between older and new devices that are in line with Ecodesign and ERP requirements. The price for one training session for a company is €30 without VAT for any number of company representatives. Apply now by filling out the questionnaire [here](#). After filling out the questionnaire, we will contact you as soon as possible.

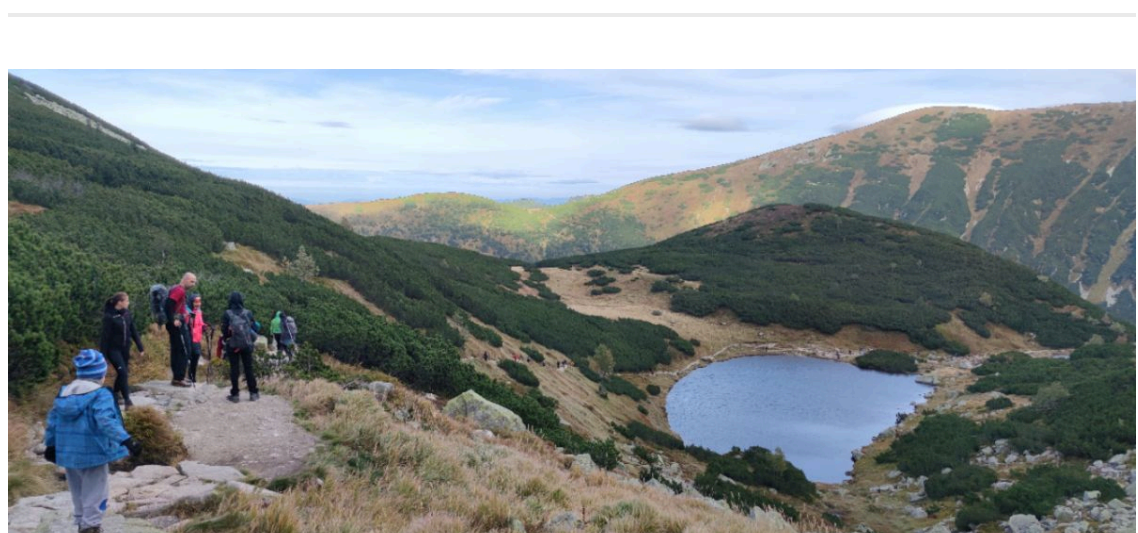

WE INVITE YOU TO A WORKING BREAKFAST IN POPRAD

October 11, 2023, from 7:00 a.m. to 11:00 a.m., the companies ADRIAN GROUP and SONNIGER are preparing a presentation event for all those interested in [hot water and hot air heating technologies](#) in the sales premises of MIRAD, s.r.o., Hranická 5300, associated with a working breakfast. The event is free of charge. You can register at adrian@adrian.sk.

s ADRIAN GROUP a SONNIGER
Vážení inštalatéri, servisní partneri,
Srdečne Vás pozývame na spoločné
Raňajky s ADRIAN GROUP a SONNIGER.
Raňajky sa budú konať na predajni
MIRAD, s.r.o.
Hranická 5300, Poprad - Priemyselný obvod
11. 10. 2023 7:00 - 11:00
Okrem skvelého občerstvenia
a darčiekov na Vás čakajú aj
zaujímavé informácie o našich
produktoch, akciách a
aktivitách.
Tešíme sa na Vašu účasť!
Kolektív ADRIAN GROUP a SONNIGER
