AGROKOMPLEX INTERNATIONAL EXHIBITION

From 17th to 20th of August 2023, ADRIAN GROUP took part in the 48th national agricultural and food exhibition AGROKOMPLEX in Nitra. We have introduced modern technologies of heating, cooling and ventilation of large spaces and not only in agriculture. The hot weather attracted most visitors to ecological air conditioners without freon. Realistic and functional cooling installations at our stand created comfortable temperature for exhibitors in neighboring stands and for all passers-by. Affordable solution to providing pleasant environment with minimal costs thus became the star of our pavilion. "You have helped us significantly to keep our vegetables and fruits fresh. Without cooling and moisture, the whole thing would wither quickly," said the head of the separate exhibition Vegetables of the Year and Fruits of the Year.

PENAM AND COOLING REFERENCE

The well-known Slovak bakery giant PENAM decided to improve the working conditions of its employees by lowering the temperature in the production of gluten-free pastries in the leavening and baking areas. This is the type of workplace where it is warm all year round and, of course, the most in summer. Two ADRIAN AIR EV18 adiabatic coolers with top air direction ensure the supply of cooled fresh filtered air. We will achieve a synergistic effect of cooling, ventilation and additional movement of air in the space. Along with ventilation in the room, the temperature will drop significantly, especially around the ovens. See our photos from the installation. If you also have a similar operation or work with a different technology that produces heat, contact us at adrian@adrian.sk and we will provide a free inspection and solution proposal.

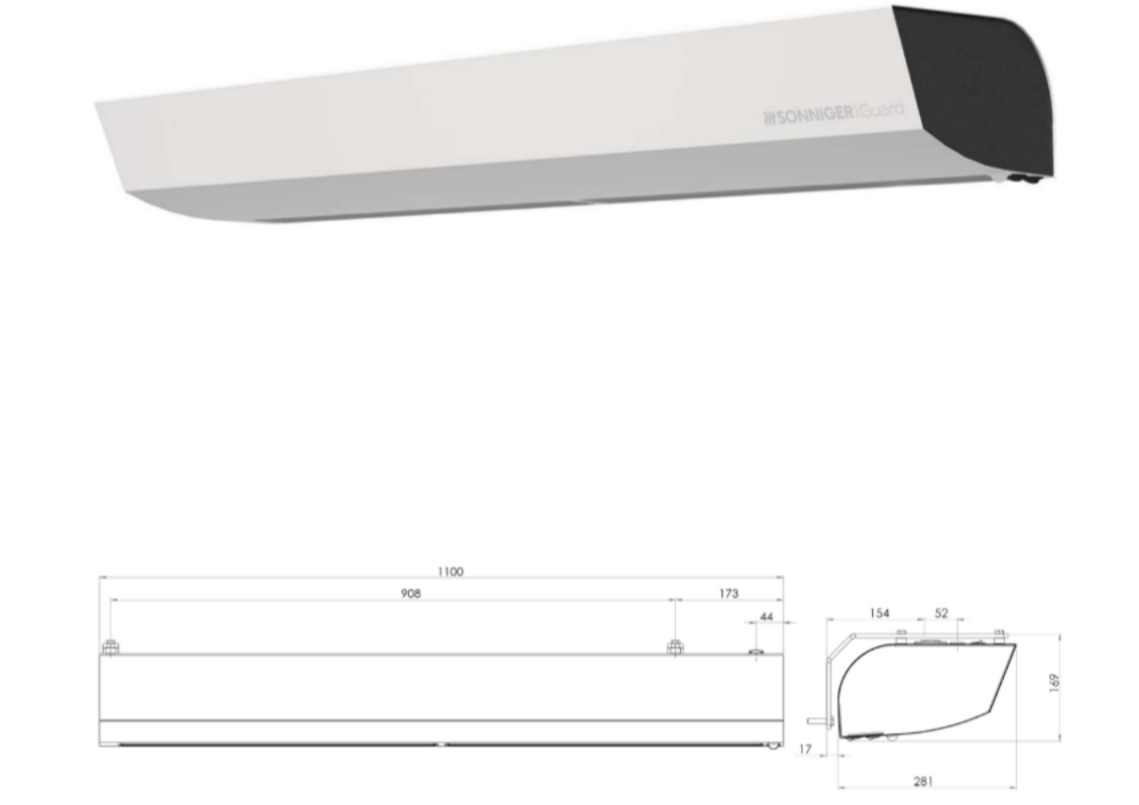

NEW AMBIENT DOOR CURTAIN INSTALLATION

For the premises of ZF SLOVAKIA a. s. in Levice, we delivered GUARD PRO air door curtains without heating for our partner installer MERAX SK s.r.o. The general contractor was IN VEST s.r.o. One-sided installation vertically up to a height of 4.5 m was sufficient. In the summer, these devices create a barrier against the penetration of heat into the premises, and in the winter they help to achieve significant savings on operating costs and save energy. Door curtains are a good choice when the gates are opened frequently, when the heated space is quickly ventilated, they also prevent the penetration of insects, dust and odors. The investment return on door curtains is usually within two years time. If you also need help with the technical solution, send a request to adrian@adrian.sk and call +421 948 312 270.

NEW COMPACT DOOR CURTAIN

ADRIAN GROUP brings you a new product in September 2023 - the GUARD ONE 100C air curtain without heating. With a length of 1100 mm and a height of 169 mm only, it is ideal for smaller doors and openings. It has a modern design and quiet operation. It finds its application mainly where common industrial and large-scale curtains are oversized and difficult to place. Compact dimensions allow easy installation in almost any arrangement. Strong air performance and quiet operation are the main advantages. It takes in heated air from the premises and creates a barrier between the interior and exterior space and limits the transfer of heat, dirt or insects. The curtain is equipped with a built-in three-stage control switch, a motion sensor and a 1 m power cable with a plug, which allows for simple installation. In addition, it is possible to connect an external control panel with a thermostat and/or a magnetic door switch. Soon we will also present a version with electric heating. More information at kurjanova@adrian.sk or +421 948 312 270.

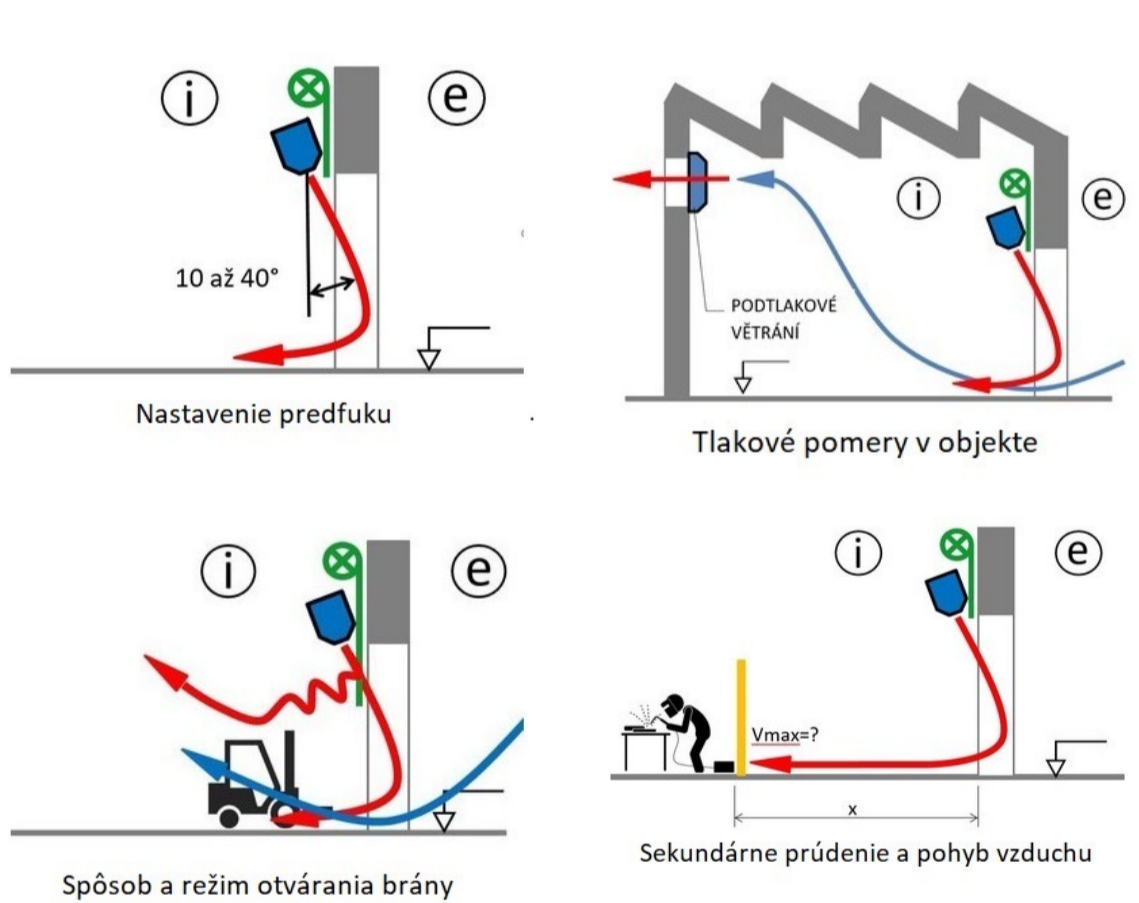

THE MOST COMMON MISTAKES WHEN INSTALLING DOOR CURTAINS

The task of air door curtains is to separate the indoor and outdoor environment. Regardless of whether they prevent the escape of heat or the penetration of cold, pollution or insects, their effectiveness is defined by the volume and speed of the blown air. The stronger the flow of the larger volume, the better the result. When heating, an effective door curtain can save up to 12% of annual heating costs. Air curtains are available without heating or with heating - hot water, electric or gas.

- What needs to be considered in the design:
- Blowing outwards - bad or none
- Doors - method and frequency of opening, most common timing of opening
- Operation - choice of horizontal/vertical installation
- Secondary flow - the position of the nearest workplaces and the impact on them
- Pressure ratios - air movement under the influence of ventilation or other gates
- Air heating - consider the need and rationale in having the heating

Expert inspection, professional installation and high-quality service are a guarantee. Contact us at adrian@adrian.sk and we will prepare a free technical solution with an individual price offer.

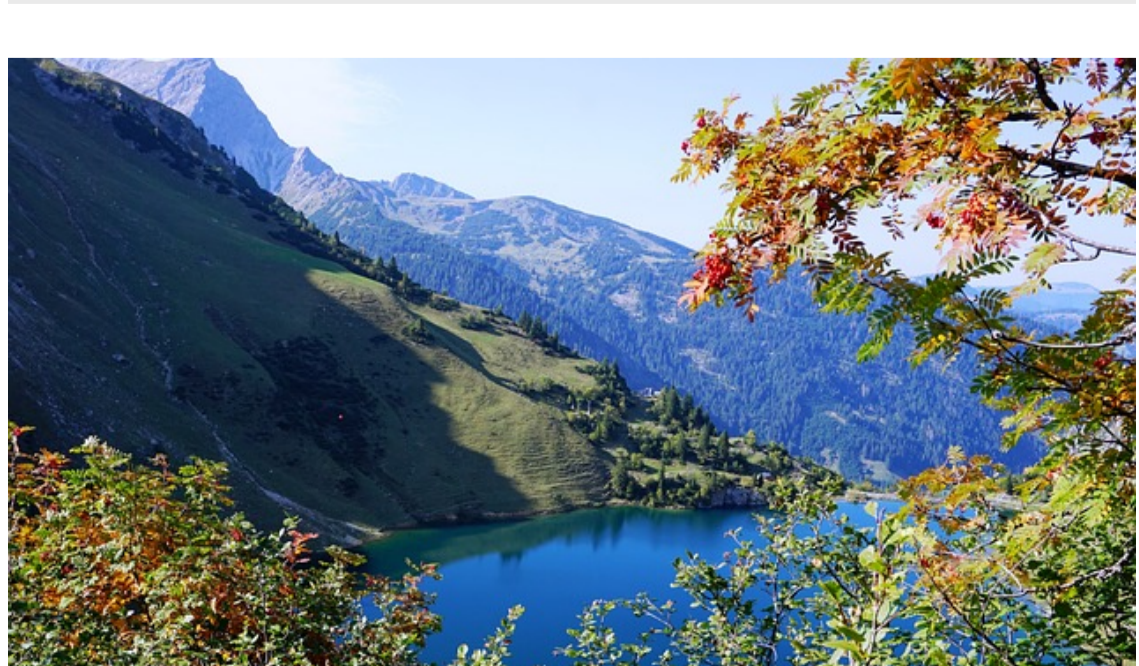

VISIT OF PARTNERS FROM KAZAKHSTAN

We established contact with the company MARKET SOLUTIONS, Atyrau, sixteen years ago, when company representatives came to Slovakia for the first time for the first training in Banská Bystrica. At that time, we had no idea that this would be the starting point of our long-term and successful cooperation. Since then, we have worked together on many references, both small and large, and we have trained dozens of partner companies in the territory. And above all, we have helped a large number of customers from industrial factories to shopping centers to children's sports schools to save on heating, ventilation and cooling costs. After the unpleasant events of recent years, we were finally able to welcome our partners to Slovakia again. We have prepared program focused on work as well as culture, relax and gastronomy including beer tasting from our local producer. We look forward to further meetings and future cooperation.

THEY WROTE ABOUT US

A specialized foreign magazine published an article about our new product. https://www.c-c-k.com/market_news/adrian-group-slovakia-credstavila-bondicomer-gva-kubri
